

Creative Sampling Alternatives

The Charter Medical needle safety product family provides a unique alternative to existing sampling site couplers and potentially hazardous needle/syringe systems. It is safe, efficient and cost-effective.

- Helps comply with national blood-borne pathogen safe needle laws.*
- Attaches to a flexible, non-vented container to prepare, sample or process blood components.
- Sterile connects for closed-system quality control sample collection.

* The Federal Needlestick Safety and Prevention Act (H.R. 5178) mandates needle stick safety practices nationwide. A copy of the document is available from Charter Medical, Ltd. Customer Care.

Shown individually and attached to syringe
