

DEHP Free - Neonatal Syringe Set with 150 Micron Filter

A safe, cost-effective system for preparing and administering pre-filled syringe aliquots of whole blood, red blood cells, platelets and fresh-frozen plasma.

What is DEHP?

Di (2-ethylhexyl) phthalate is a chemical that makes PVC more flexible.¹⁻³ Technical Information and References Attached.

- Needleless system eliminates needlestick injury, meets OSHA requirements and complies with national needleless laws⁴
- Provides 150 μ final filtration in accordance with AABB blood administration requirements⁵
- Syringe blood aliquots (RBC s, plasma) must be administered to patient within 24 hours and syringe platelet aliquots within 4 hours⁶

When used with sterile connection technology:

- Provides closed blood delivery system
- Maintains primary unit expiration date
- Maximizes usage of adult size blood units
- Limits neonatal donor exposure
- Reduces aliquot preparation costs

CATALOG #	DESCRIPTION	QTY
03-960-00F	DEHP-Free Blood Administration set with 150 micron filter and 30 cc BD syringe	24
03-960-10F	DEHP-Free Blood Administration set with 150 micron filter and 60 cc BD syringe	24
03-960-33F	DEHP-Free Blood Administration set with 150 micron filter and syringe adapter	48
03-960-35F	DEHP-Free Blood Administration set with 150 micron filter and 35 cc MONOJECT syringe	24
03-960-37F	DEHP-Free Blood Administration set with 150 micron filter and 60 cc MONOJECT syringe	24

Are Your Infants at Risk from DEHP Exposure?

The National Toxicology Program (NTP) Expert Panel has expressed serious concern about exposure of critically ill infants to DEHP, a plasticizer commonly used to make PVC tubing, containers and other medical devices required in the NICU.¹

How are Infants Exposed to DEHP?

DEHP can leach from plastic medical devices into solutions that come in contact with the plastic. The amount of DEHP that leaches depends on many factors such as temperature and duration of contact with the plastic. Neonates on ECMO, receiving exchange transfusion or those undergoing multiple medical procedures are considered at highest risk for DEHP exposure.¹⁻³

Why is DEHP a Cause for Concern?

DEHP Exposure is known to cause adverse effects on the development of the male reproductive systems of laboratory animals.¹⁻³

How can DEHP Exposure be Avoided?

FDA advises clinicians to use DEHP-Free products where available.³

For more information about Charter Medical's DEHP-Free products and initiatives, please contact our Customer Care Team at 1.866.458.3116

**Charter Medical's
widely used neonatal
syringe set is now
DEHP-Free!**
