GRIP-LOK® WA Universal PICC Catheter Securement

**Take Your PICC...
One Grip-Lok® Fits Them All**

New Grip-Lok Wide Adhesive: Universal "suture-free" stabilization for PICC catheters.

Manufactured catheter stabilization devices are listed as "preferred" in the Infusion Nursing Standards of Practice because they increase catheter dwell times while reducing unscheduled restarts and other catheter complications.

Grip-Lok® WA is a catheter stabilization device that is strong enough to lock catheters securely in place, yet versatile enough for almost any securement situation. The adhesive on Grip-Lok® WA will adhere and secure PICC hubs made from silicone, PVC and other plastic compounds.

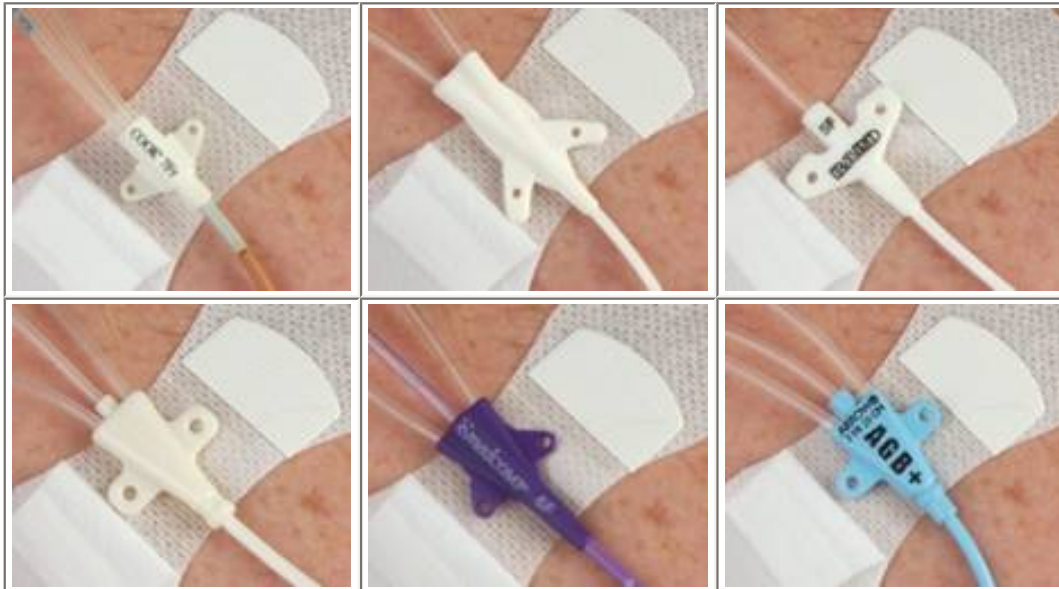

Grip-Lok® WA is latex-free and is packaged in individual sterile units, allowing you to use it close to a wound site or right in the sterile field.

Features:

- Soft and flexible fabric design improves patient comfort.
- Provides superior securement for both horizontal and vertical lifting accidental line pulls.
- Simple to apply, inspect and adjust.
- Hypoallergenic, breathable and latex-free to reduce the risk of allergic reactions and skin irritation.
- Suture-free securement reduces the risk of needlestick injury.
- Save money and time by stocking just one Grip-Lok® WA Universal Catheter Securement Device that will fit a wide variety of catheters from multiple manufacturers.

Examples of just a few of the many Catheters that the Grip-Lok WA is compatible with.
